

# Why isn't this packaging green?

Well, actually it is.

Much in the same way you can't judge a book by it's cover, you can't always tell exactly how "green" packaging is by a casual glance.

However, your big box customers will know immediately just how green your packaging really is. Are you ready? We are.

We're ready to be your source for :

- Water-based Coating
- Recycled paperboard and blisterboard
- PLA - compostable corn derivative films
- Sustainable linseed oil based inks
- PLA films for stretchpack, clamshells, thermoform blisters, and windows.
